

A Trusted Advisor of Security Solutions and Services

#TrustedPKIAdvisor

**LOTUS server version
4.6+ CSR Generation**

WHITE PAPER

<https://www.acmetek.com>

Lotus Domino is a business collaboration software developed by IBM to host critical applications, messaging (enterprise-grade email) and workflow, and provide security features for business-critical information.

Lotus Domino can be used as a Web server and/or as an application server for the Lotus Notes application, the client-side of a client-server collaborative application.

STEPS:

1. From the Domino Administration client, choose File-open Server and select the server you are securing.
2. On the file tab, double-click the Server Certificate Administration database.

3. Select Create Key Ring.
4. Choose a name and password for the keyring file, then choose your key size. Use the largest key size available (2048-bit, if available).
5. Fill in the DN information, and click Create Key Ring.
6. Hit OK, then click Create Certificate Request.
7. Copy and paste the CSR (including the BEGIN and END tags) into the DigiCert form.
8. After you receive your SSL Certificate from DigiCert, you can install it.

We hope this article helped you with this easy process. If you cannot use these instructions, we recommend you contact either the vendor of your software or the hosting organization that supports it.

ABOUT ACMETEK

“Acmetek is a Global Distributor and a Trusted Advisor of PKI /IoT & SSL Security Products and Managed Services Company.”

[Acmetek Global Solutions, Inc.](#) is a privately held Digital Security Services Company serving USA & APAC clients in website security solutions since 2010. The firm specializes in providing insight and expertise to enterprises, SMBs, governments, and provides a full range of Security Products, SSL, PKI, IoT, Malware Identity Scanning’s, Vulnerability Assessments, and Two-Factor Authentication.

Our Web Security Solutions

SSL CERTIFICATES

Domain Validation

Activates HTTPS with a padlock. This SSL can issue in minutes.

Organization Validation

Activates HTTPS with a padlock. It validates an organization by providing a trust seal.

Extended Validation

Activates HTTPS with a padlock. It validates the organization by providing the company name before the domain name directly on the browser.

Code Signing Certificates

Protects users from downloading compromised software, prevents tampering, and provides the trusted assurance of authentication.

MPKI SOLUTIONS

Email Certificates

Using an Email certificate for user authentication encrypts transmission and signs the message, delivering comprehensive benefits for the sender and receiver.

Document Signing Certificates

Document signing certificates allow individuals, teams, and organizations to add an electronic, digital signature to a document in a variety of file formats to prove ownership.

Device Certificate

Verify identity, encrypt communications, and secures all home networks for internet connected devices before and after manufacturing.

MDM (Mobile Device Management)

Get a comprehensive look at mobile devices, master mobile email, and application rollout while protecting all data and devices.

WIFI Certificates

Increases trust in public hotspots and protect user data.
